NOTES:

1. For series/parallel operation of heaters, equipment should be designed that at normal supply voltage bogey tubes will operate at this value of heater current/voltage.
2. Heater voltage supply variations shall be restricted to maintain heater voltage/current within the specified values.

APPLICATION

Types 6C9 and 17C9 are duo tetrodes contained in a T-6 1/2 10 pin bulb. They are designed for service as VHF RF amplifiers and VHF autodyne mixers. Except for heater characteristics, Types 6C9 and 17C9 are identical.
